Dissolve ingredients (except bicarbonate, vitamins, cysteine and sulfide) and sparge medium for $30-45$ min with $80 \% \mathrm{H}_{2}$ and $20 \% \mathrm{CO}_{2}$ gas mixture to make it anoxic. Add and dissolve bicarbonate and adjust pH to 6.8 , then distribute under same gas atmosphere into anoxic Hungate-type tubes or serum vials and autoclave. After sterilization add cysteine and sulfide from sterile anoxic stock solutions autoclaved under 100\% $\mathrm{N}_{2}$ gas atmosphere. Vitamins are prepared under $100 \% \mathrm{~N}_{2}$ gas atmosphere and sterilized by filtration. Adjust pH of complete medium to 6.5. For incubation use sterile $80 \% \mathrm{H}_{2}$ and $20 \% \mathrm{CO}_{2}$ gas mixture at two atmospheres of pressure.

Clarified rumen fluid (from medium 1310)
Rumen fluid from cow or sheep (obtained from fistulated animals or abattoir refuse) is filtered through muslin, autoclaved at $121^{\circ} \mathrm{C}$ for 15 min and then centrifuged at $27,000 \mathrm{~g}$ for 20 min . The supernatant is made anoxic by sparging with $100 \% \mathrm{~N}_{2}$ gas for 15 min , dispensed under same gas atmosphere into anoxic serum vials to $30 \%$ of volume and then stored frozen at $-20^{\circ} \mathrm{C}$.
