

MSDS-Material Safety Data Sheet ELISA controls

ELISA (enzyme-linked immunosorbent assay) controls contain lyophilized plant material. Positive controls are infected with the specified plant virus species.

Intended use

Positive and negative controls are intended to verify the ELISA performance. All products are for in vitro use only. They are not to be used for human or animal applications. The customer is solely responsible for determining the suitability of the goods for the purpose which they intend to use them.

Biohazard

These products are not considered to present a hazard to health when used in accordance to the principles of Good Laboratory Practice and Good Standards of Occupational Hygiene.

Storage and stability

DSMZ products have a guaranteed minimum shelf life of 6 month from the date of delivery when stored according to the specifications. No further warranties are given. Positive controls in ELISA may vary in OD values according to plant virus species and strains, and plant tissue used.

The above information is believed to be correct but does not purport to be all inclusive and shall be used only as a guide.

DSMZ shall not be held liable for any damage resulting from handling or from contact with the above products.
