Prepare the medium under a nitrogen atmosphere. Dispense 5 ml into 25 ml tubes fitted with rubber stoppers.

Autoclave 121°C 20 min and add 2mM (final concentration) sodium acetate trihydrate, 2mM (final concentration)sodium thiosulfate pentahydrate and 1mM (final concentration) sodium bicarbonate from anaerobic, autoclaved stock solutions(100x).

Before inoculation 2% sterile O₂ or 10% sterile air is added to the headspace.
