Adjust final pH to 5.8.

Prepare the medium anaerobically under 100% nitrogen. The following constituents are prepared separately and added to the autoclaved mineral salt solution: Yeast extract (20 ml of 10% w/v solution)-boiled for a few minutes not autoclaved; sulfur (10 g)-sterilized by steaming for 3 h on each of three successive days; $Na_2S \times 9 H_2O$ (10 ml of 3% w/v solution)-autoclaved under nitrogen atmosphere.
