Dissolve ingredients (except carbonate, carbohydrates, cysteine and sulfide) and sparge medium with 100% CO₂ gas for 30 - 45 min to make it anoxic. Add the carbonate and equilibrate the medium with the CO₂ gas to pH 6.8. Distribute under 100% CO₂ gas atmosphere into anoxic Hungate-type tubes or serum vials and autoclave. Thereafter, add glucose, maltose, cellobiose, starch, cysteine and sulfide from sterile anoxic stock solutions prepared under 100% N₂ gas. Cellobiose should be sterilized by filtration. Adjust pH of complete medium to 6.7 - 6.8, if necessary.

Clarified rumen fluid (from medium 1310)

Rumen fluid from cow or sheep (obtained from fistulated animals or abattoir refuse) is filtered through muslin, autoclaved at 121°C for 15 min and then centrifuged at 27,000 g for 20 min. The supernatant is made anoxic by sparging with 100% N₂ gas for 15 min, dispensed under same gas atmosphere into anoxic serum vials to 30% of volume and then
