Prepare the medium without adding the vitamins, histidine, yeast extract, NH<sub>4</sub>Cl, Na<sub>2</sub>CO<sub>3</sub>, and NaHCO<sub>3</sub> using anaerobic conditions, under nitrogen. If the medium has been boiled to remove oxygen add the NH<sub>4</sub>Cl, Na<sub>2</sub>CO<sub>3</sub>, and NaHCO<sub>3</sub> after the medium had cooled. Dispense into tubes stopper with rubber stoppers (serum tubes or bottles, or screw capped tubes). Autoclave, and to the cooled medium add the vitamins (filter sterilised under N<sub>2</sub>), histidine, yeast extract, and Na<sub>2</sub>S x 9 H<sub>2</sub>O from anaerobic, sterile stock solutions.
