Dissolve ingredients (except bicarbonate, sulfur and vitamins), then sparge medium with 100% N<sub>2</sub> gas for 30 – 45 min to make it anoxic. Adjust pH to 7.0 and dispense medium under same gas atmosphere into anoxic Hungate-type tubes or serum vials which contain already the appropriate amount of sulfur. Autoclave at a temperature of **110°C** for 20 min! Add vitamins from an anoxic stock solution prepared under 100% N<sub>2</sub> gas and sterilized by filtration and bicarbonate from a sterile anoxic stock solution prepared under 80% N<sub>2</sub> and 20% CO<sub>2</sub> gas atmosphere. The pH of the complete medium should be 7.0.

For DSM 14813 adjust pH of the medium to 6.5.
